Gas Pool Heaters & Pool Heat Pumps - Hayward
Heat pumps are very efficient because they utilize the heat from the surrounding air to heat the pool's water versus burning natural gas or propane. Heat pumps work well in warmer climates but are at a disadvantage in colder climates.

Heat Pumps | Pool Supplies Canada

Heat Pumps are energy efficient electric pool heaters, that work by transferring heat from the surrounding air into the pool water, rather than generating heat themselves. In terms of energy used to heat they typically are more efficient than a gas powered heater. These units require temperatures above 10 degrees Celsius to perform efficiently.

Swimming Pool Heater VS. Heat Pump - Leslie's Poolapedia

Heat Pumps. Heat pumps are becoming increasingly popular for pool owners. They use the ambient air surrounding the unit to heat your pool. The air passes over an evaporator coil using heated refrigerant to heat water returning back into your pool.

Heat Pump Swimming Pool Heaters | Department of Energy

Heat pumps use electricity to capture heat and move it from one place to another. They don't generate heat. As the pool pump circulates the swimming pool's water, the water drawn from the pool passes through a filter and the heat pump heater.
